DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: The reference to Figure 2C on page 6 should be deleted because no such figure exists. In line 1 of page 9, "lay" should be changed to "layer".

Appropriate correction is required.

Drawings

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 12, 14a, 72, 74. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kinkead et al. (5,626,820) in view of de Ruiter et al. (5,616,169).

5. Kinkead et al. '820 disclose a process for producing a vapor absorptive non-woven air filter, comprising providing a non-woven carrier of thermoplastic fibers, applying adsorbent particles of impregnated activated carbon or ion exchange resin to the carrier surface, heating the material, and calendering the heated material with the distributed adsorbent particles, wherein the heating and calendering are sufficient to retain the adsorbent particles (figure 5, col. 6, line 28 to col. 7, line 25). The instant claims differ from the disclosure of Kinkead et al. '820 in that the adsorbent particles comprise a sulfonated copolymer.

6. de Ruiter '169 disclose a pollutant filter containing supported particulate activated carbon or sulfonated styrene-divinyl benzol copolymers (abstract, col. 3, lines 6-28, claim 1). It would have been obvious to one having ordinary skill in the art at the time of the invention to modify the adsorbent of Kinkead et al. '820 by using a sulfonated copolymer in order to provide an adsorbent known to be useful in gas pollutant removal systems that employ particulate supported materials.

Allowable Subject Matter

7. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. Claims 5-8 are allowed.

9. The following is an examiner's statement of reasons for allowance: The prior art of record fails to disclose or suggest a motivation for forming a filter element by forming a layer of

Art Unit: 1724

adsorbent powder material, delivering binder onto selected regions of the layer to bond the regions in accordance with a programmed model, and repeating the forming and delivering steps until a filter element matching the programmed model is formed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references listed on the attached PTO-892 form disclose supported fluid filters.
